I purchased this book as an additional textbook for my microbiology classes at the medical school. It has funny illustrations and conveys info in a simple way. I loved reading it and never got tired. It is not a shiny book but print quality is nice. CMMRS helped me to ace microbiology final, but have not used it for step 1 prep. Would recommend!

SUMMARY Acinetobacter is a complex genus, and historically, there has been confusion about the existence of multiple species. The species commonly cause nosocomial infections, predominantly aspiration pneumonia and catheter-associated bacteremia, but can also cause soft tissue and urinary tract infections. Community-acquired infections by Acinetobacter spp. are increasingly reported ...

Sourdough is a stable culture of lactic acid bacteria and yeast in a mixture of flour and water. Broadly speaking, the yeast produces gas (carbon dioxide) which leavens the dough, and the lactic acid bacteria produce lactic acid, which contributes flavor in the form of sourness. The lactic acid bacteria metabolize sugars that the yeast cannot,
